As chief economist at iCIMS, a leading provider of talent acquisition software, Josh Wright leads the company’s proprietary research and has developed the iCIMS Monthly Hiring Indicator (MHI), an economic indicator of U.S. new hires and job openings. iCIMS provides customers with tangible insights into recruiting by analyzing its database of more than 75 million applications and four million hires per year.

Before joining iCIMS in 2016, Wright served as a U.S. economist with Bloomberg L.P., where he analyzed macroeconomic trends and frequently contributed as a guest on Bloomberg Radio and Bloomberg TV.

As senior market and policy analyst at the Federal Reserve for more than five years, Wright spearheaded multiple research projects, helped build the mortgage-backed securities (MBS) portfolio of more than $1 trillion and advised policymakers across the legislative and executive branches of government during the 2007–2009 financial crisis and recovery period.

Wright has published extensively on labor and housing markets, as well as U.S. monetary policy, in academic and policy journals, popular blogs and media outlets, such as The New York Times and Fortune. His insights are frequently cited in publications, including The Wall Street Journal, the Associated Press and Bloomberg BusinessWeek.

Wright holds a Bachelor of Arts from Yale University, where he graduated summa cum laude and Phi Beta Kappa, and a master’s in public policy from the Harvard Kennedy School of Government, with a concentration in macroeconomic policy.
